PROFESSIONAL SUMMARY

Software Developer with 2.5 years of experience building Python REST APIs and JavaScript/React frontends. Proficient in Django, FastAPI, PostgreSQL, and Docker. Delivered features end-to-end — from database schema design to React UI — in cross-functional agile teams. Eager to contribute to scalable, well-tested codebases.

TECHNICAL SKILLS

- Python — Django, FastAPI, Flask
- JavaScript / React.js
- RESTful API Development & Integration
- PostgreSQL, MySQL
- Docker, Docker Compose
- Git, GitHub, code-review workflows
- pytest, Postman API testing
- Redis (session caching)
- Linux / Ubuntu, Bash

WORK EXPERIENCE

Python Developer — KashiTech Solutions, Varanasi

March 2022 – Present (2 yrs 3 months)

- Developed and maintained Django REST Framework APIs for an LMS platform serving 3,000+ students and 50+ instructors across 5 universities.
- Integrated Razorpay payment gateway and automated PDF invoice generation using WeasyPrint, handling 500+ transactions per month.
- Built interactive React components — course browsing, progress tracking, quiz module — reducing student support tickets by 25%.
- Designed PostgreSQL schema (12 tables, complex many-to-many relationships); wrote optimised queries cutting dashboard load time from 5 s to 0.9 s.
- Containerised all services with Docker; standardised deployments across dev, staging, and production environments.
- Enforced Git flow branching and mandatory PR reviews across a 4-person team.

Web Development Intern — DigitalKashi, Varanasi

September 2021 – February 2022 (6 months)

- Built 10 REST API endpoints in FastAPI and validated them with Postman test suites.
- Developed HTML/CSS/JavaScript pages consuming backend REST APIs.
- Wrote unit tests with pytest; achieved 70% coverage on new modules.

EDUCATION

B.Tech – Computer Science & Engineering, IIT (BHU) Varanasi, 2021 | CGPA: 7.9 / 10

PROJECTS

- Student result portal — FastAPI backend + React frontend + PostgreSQL; deployed with Docker on a VPS.
- Automated course certificate generator — Python script using ReportLab + Celery task queue.
